

GUIDELINES FOR INSTALLING YOUR HIGHBACK BOOSTER CAR SEAT

- Never use in connection with a 2-point belt.
- Caution! The plastic parts of the child safety seat can heat up in the sun.

Securing your child

- Have your child sit in the child seat. Pull out the vehicle seat belt and guide it in diagonally across the front of your child to the vehicle seat buckle. Do not twist the belt. Click the buckle into the vehicle seat buckle.
- Guide the diagonal (shoulder strap) belt into the dark red belt holder at the top of the headrest.

- SAFETY TIP: Ensure the diagonal belt runs above your child's collarbone and does not rest at his or her throat.
- SAFETY TIP: The lap belt must lie as low as possible over your child's hips, never over their soft abdomen.

Adjusting the height of the headrest

- Have your child sit in the child seat. Push the adjustment button at the top of the headrest.
- Adjust the headrest to ensure you can still pass two fingers between the headrest and your child's shoulders.

Dear Customer,

Rest assured that each car seat has been cleaned and safety checked before each and every hire. Please follow our installation instructions carefully, and check our video gallery for video guides (www.thestorkexchange.ie).

We know children are messy by nature (we have two!), but please try and return the car seats in a reasonable condition – seats can be kept clean by avoiding anything that can spill, drip, smear or wipe! Crumbs are ok, ice-cream and chocolate smears are not!
